What I do...

So... what happened?

MVP Communities

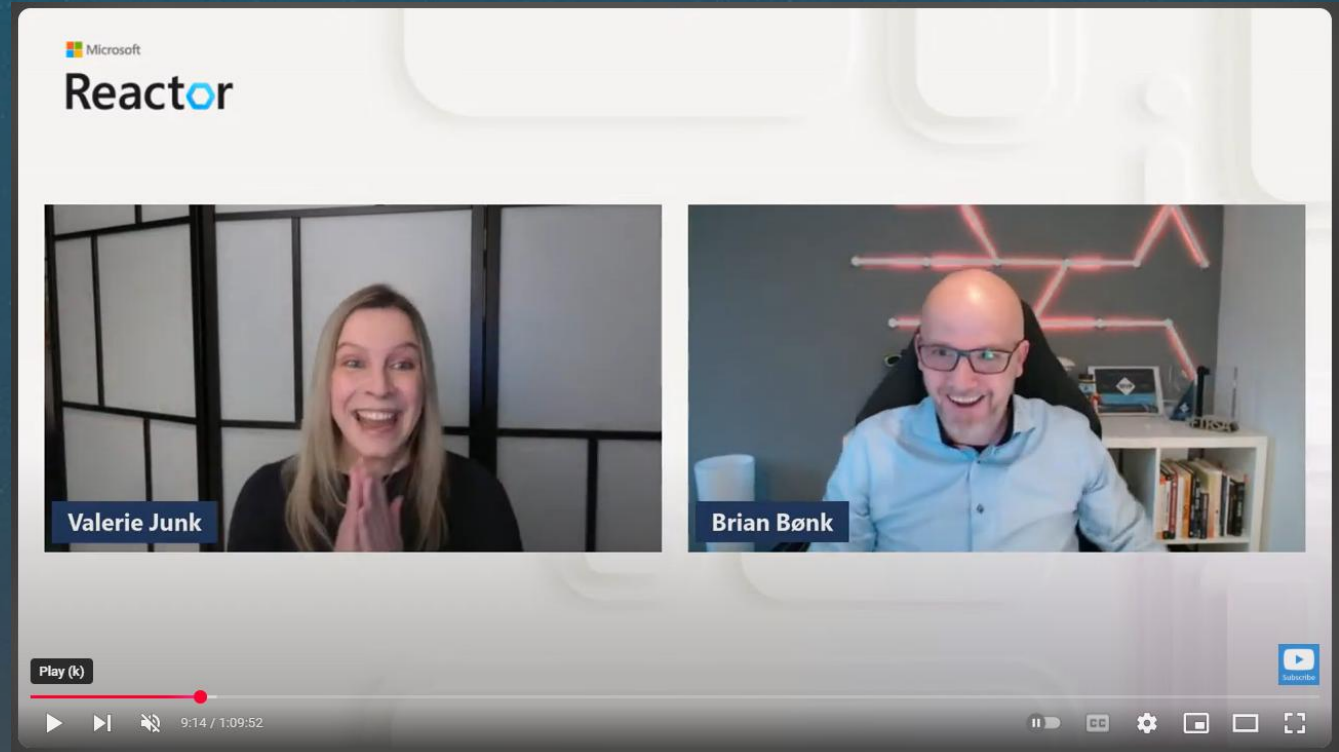

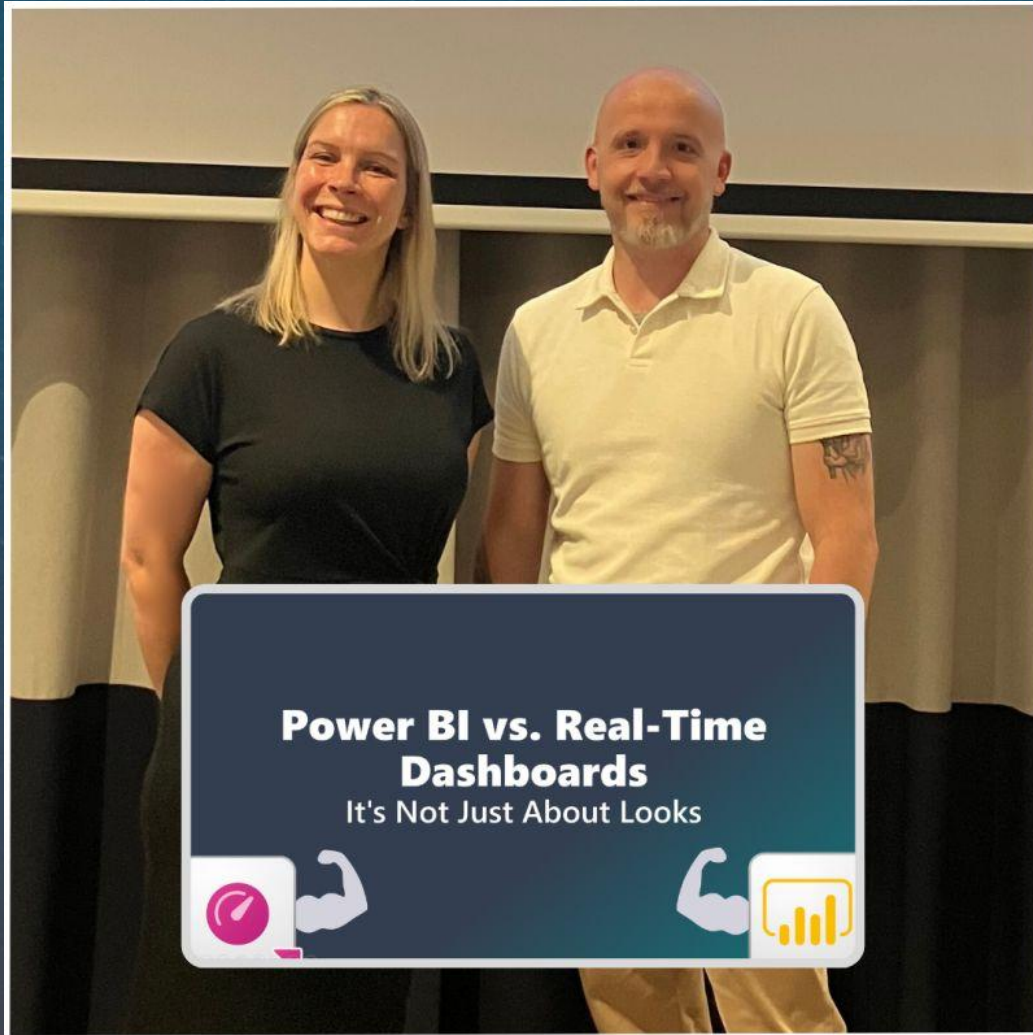

Congratulations!

Valerie Junk,

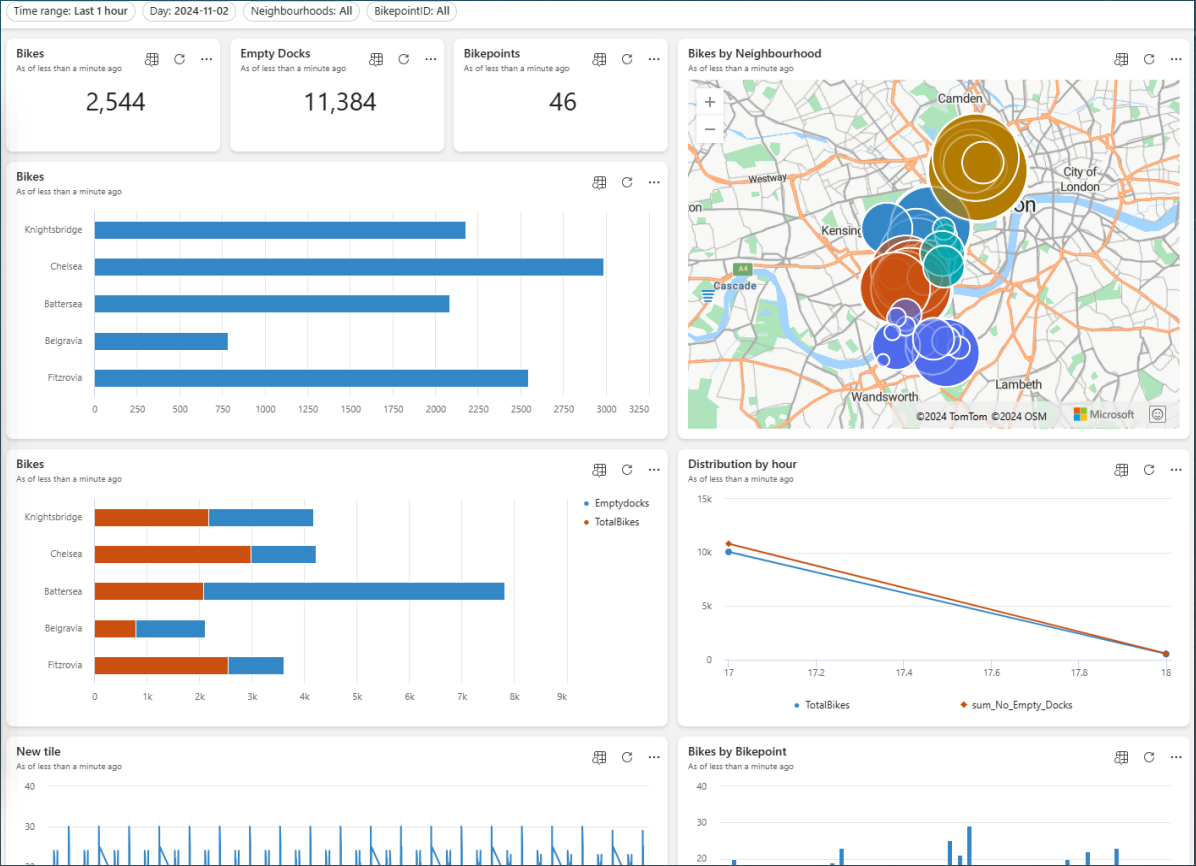

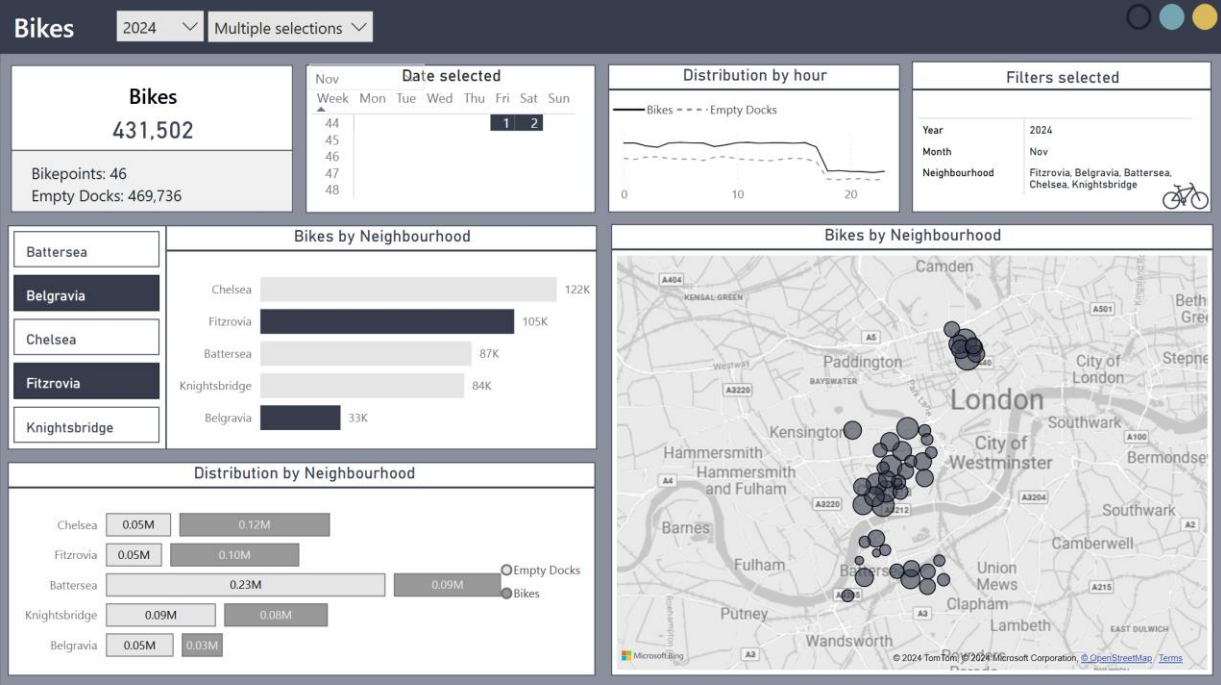

We're pleased to welcome you to another year for the Microsoft Most Valuable Professionals (MVP) program in recognition of your outstanding contributions to the community in the following Technical Area/s:

- Real-Time Intelligence
- Power BI

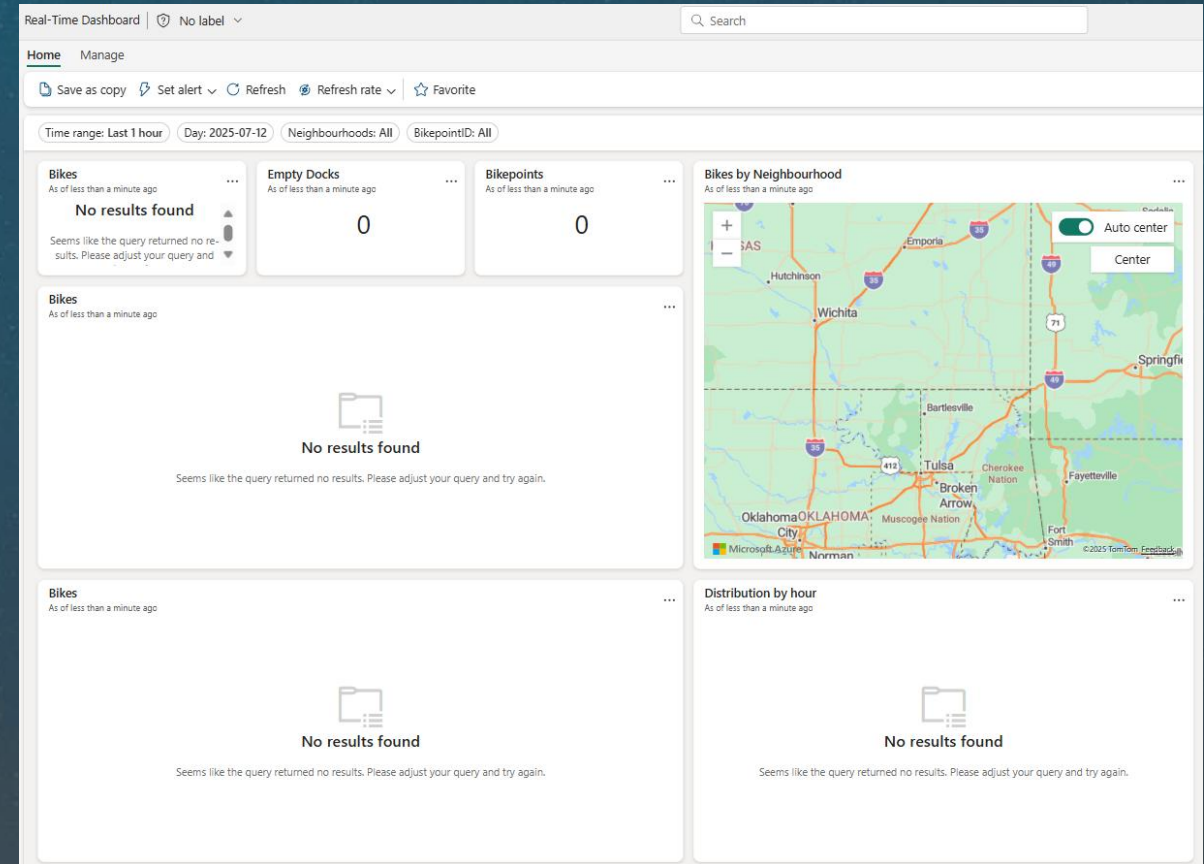

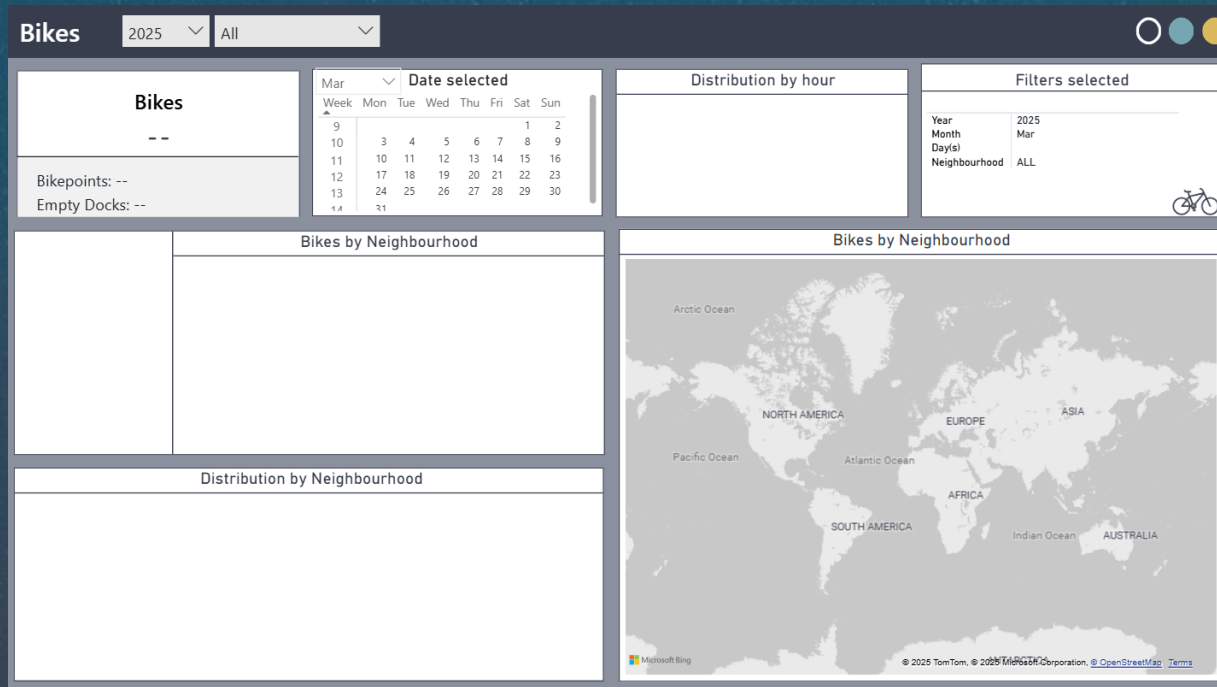

And how did I get here?

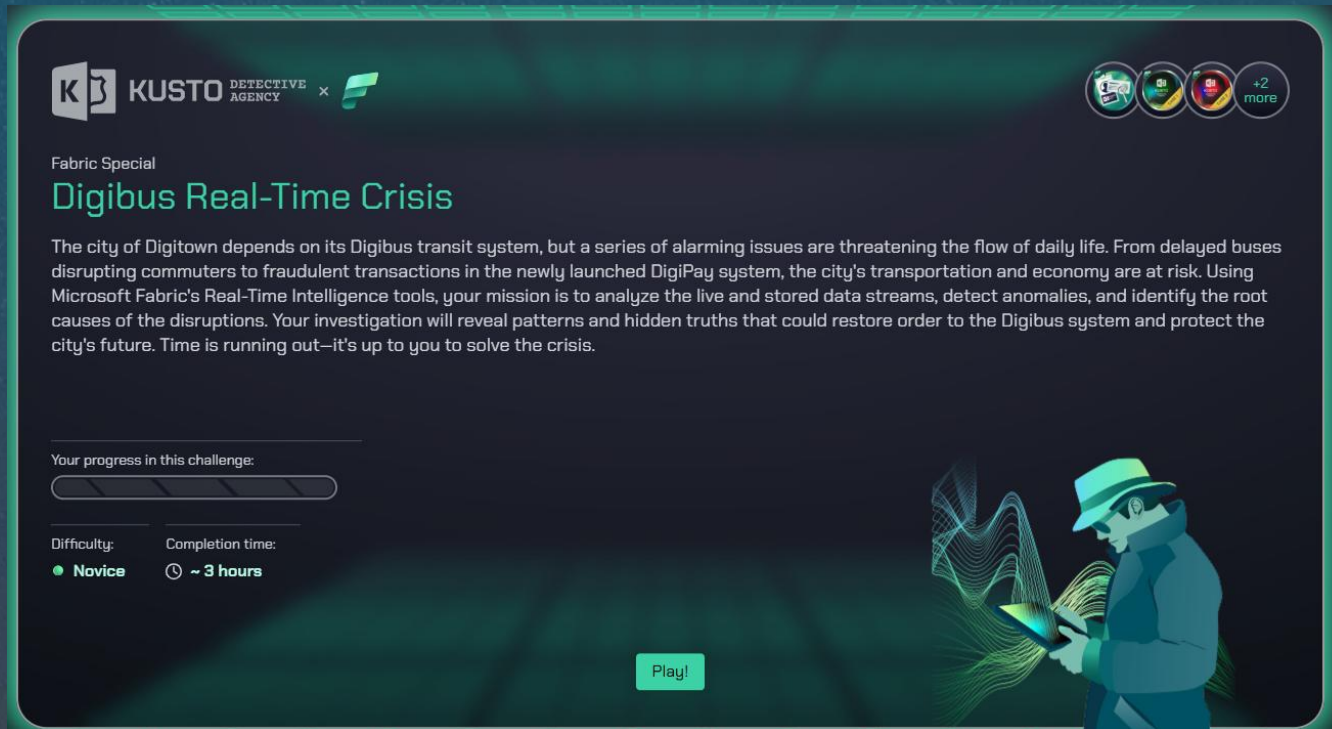

To be honest

To be honest

First steps

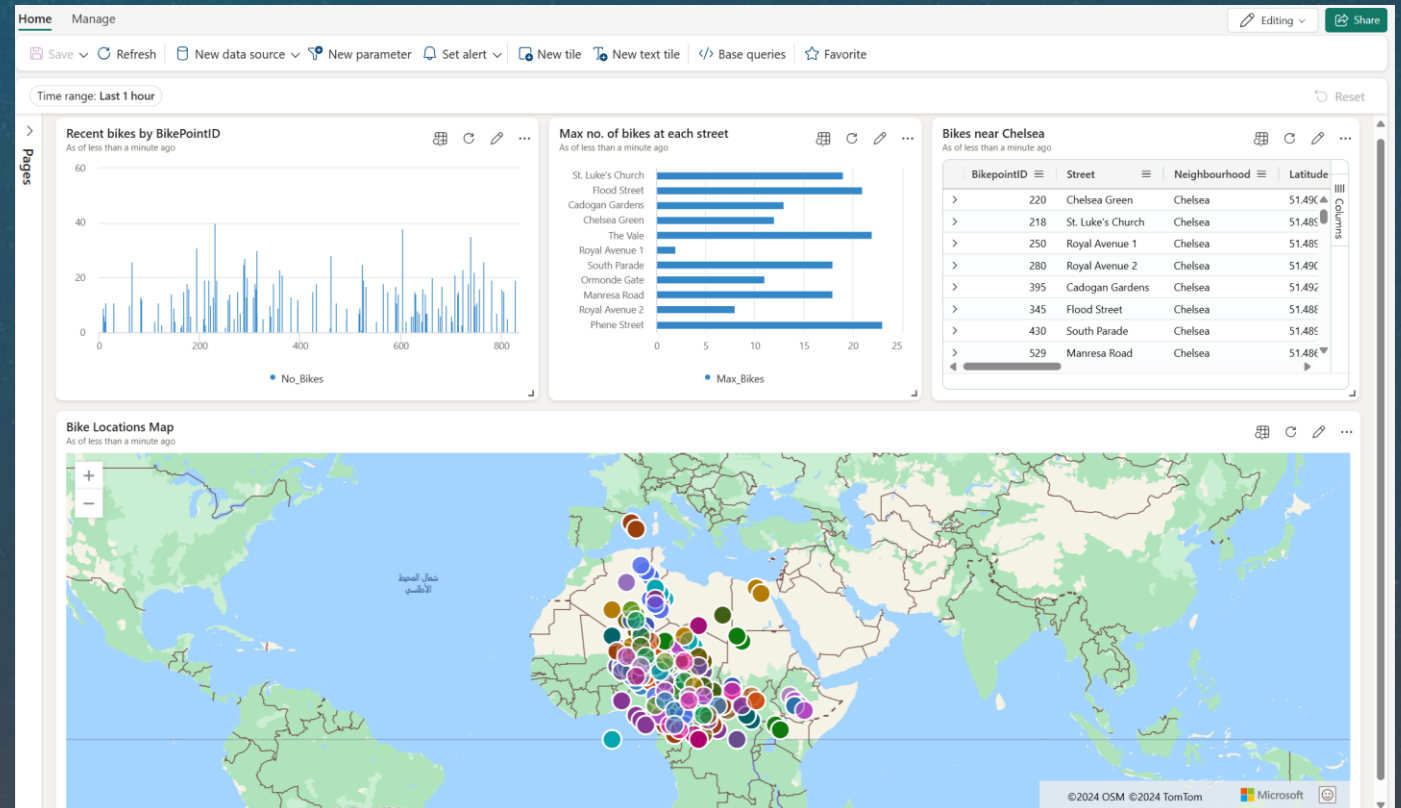

<https://detective.kusto.io/>

First steps

End to end tutorial

End to end tutorial - Introduction

- 1- Set up Eventhouse
- 2- Get data in the Real-Time hub
- 3- Transform data in your KQL database
- 4- Query streaming data using KQL
- 5- Create a Real-Time dashboard
- 6- Create a Power BI report
- 7- Set an alert on your event stream
- 8- Clean up resources

Challenges I faced

Where do I get the data?

- Coming from Power BI, I was used to static tables and refresh cycles.
- Where does this live data actually come from?

Where do I get the data?

Data sources

Select the source needed to bring in new data and follow the short wizard to ingest the data.

-  All
-  Microsoft sources
-  Database CDC
-  Azure events
-  Fabric events
-  **Sample scenarios**
-  Public Feeds

Sample scenarios

Bicycle rentals

Sample scenarios (streaming)

Connect

Streaming sample data of bicycle rentals, including rental station locations (longitude and latitude), number of bikes, number of empty docks.

Stock market

Sample scenarios (streaming)

Connect

Eventstream of stock market data including bids, prices, volume, event times, and more.

Yellow Taxi

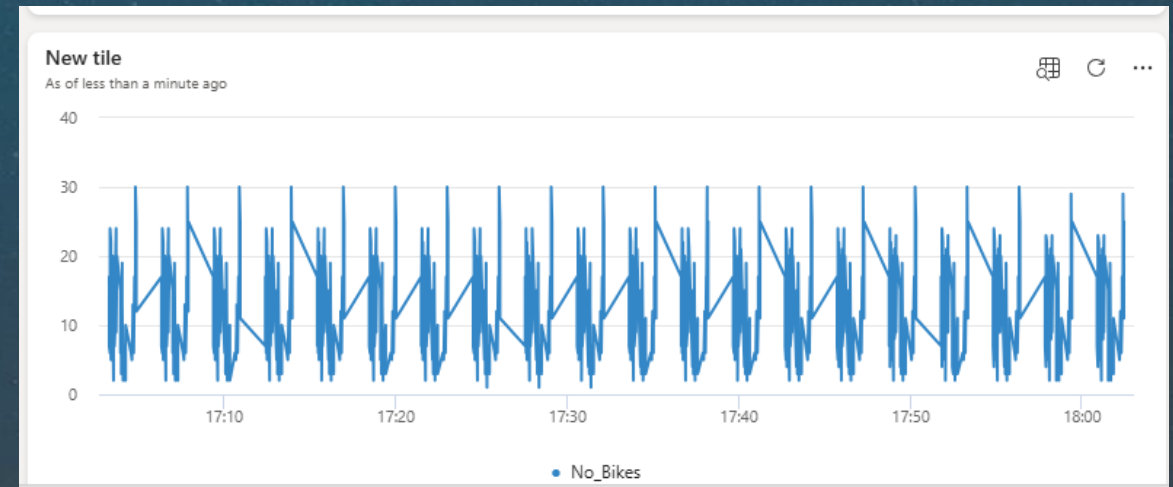

Sample scenarios (streaming)

Connect

Eventstream of taxi data including pickup and drop off times, passenger counts, distances, fares, and more.

Too much data, too fast

- Suddenly: thousands of events per second
- What's important?
- What do I ignore?

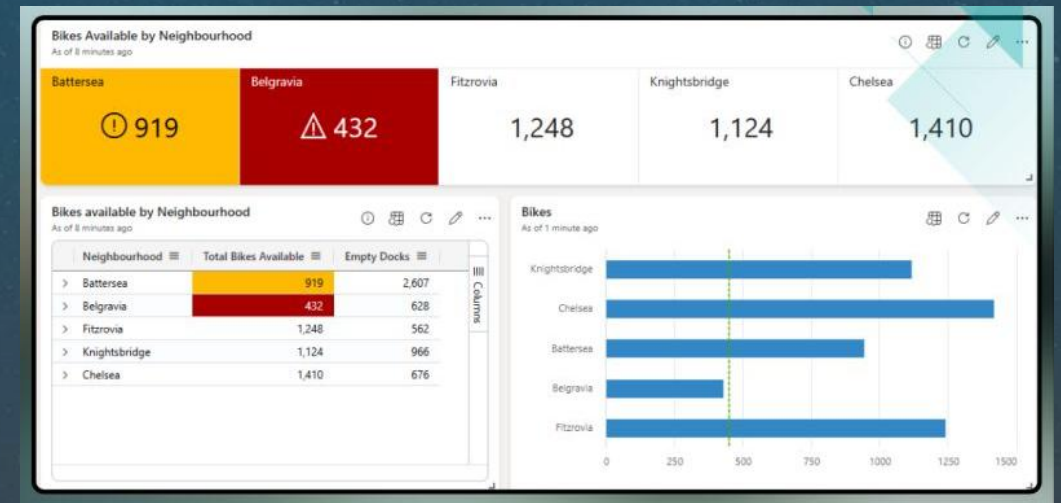

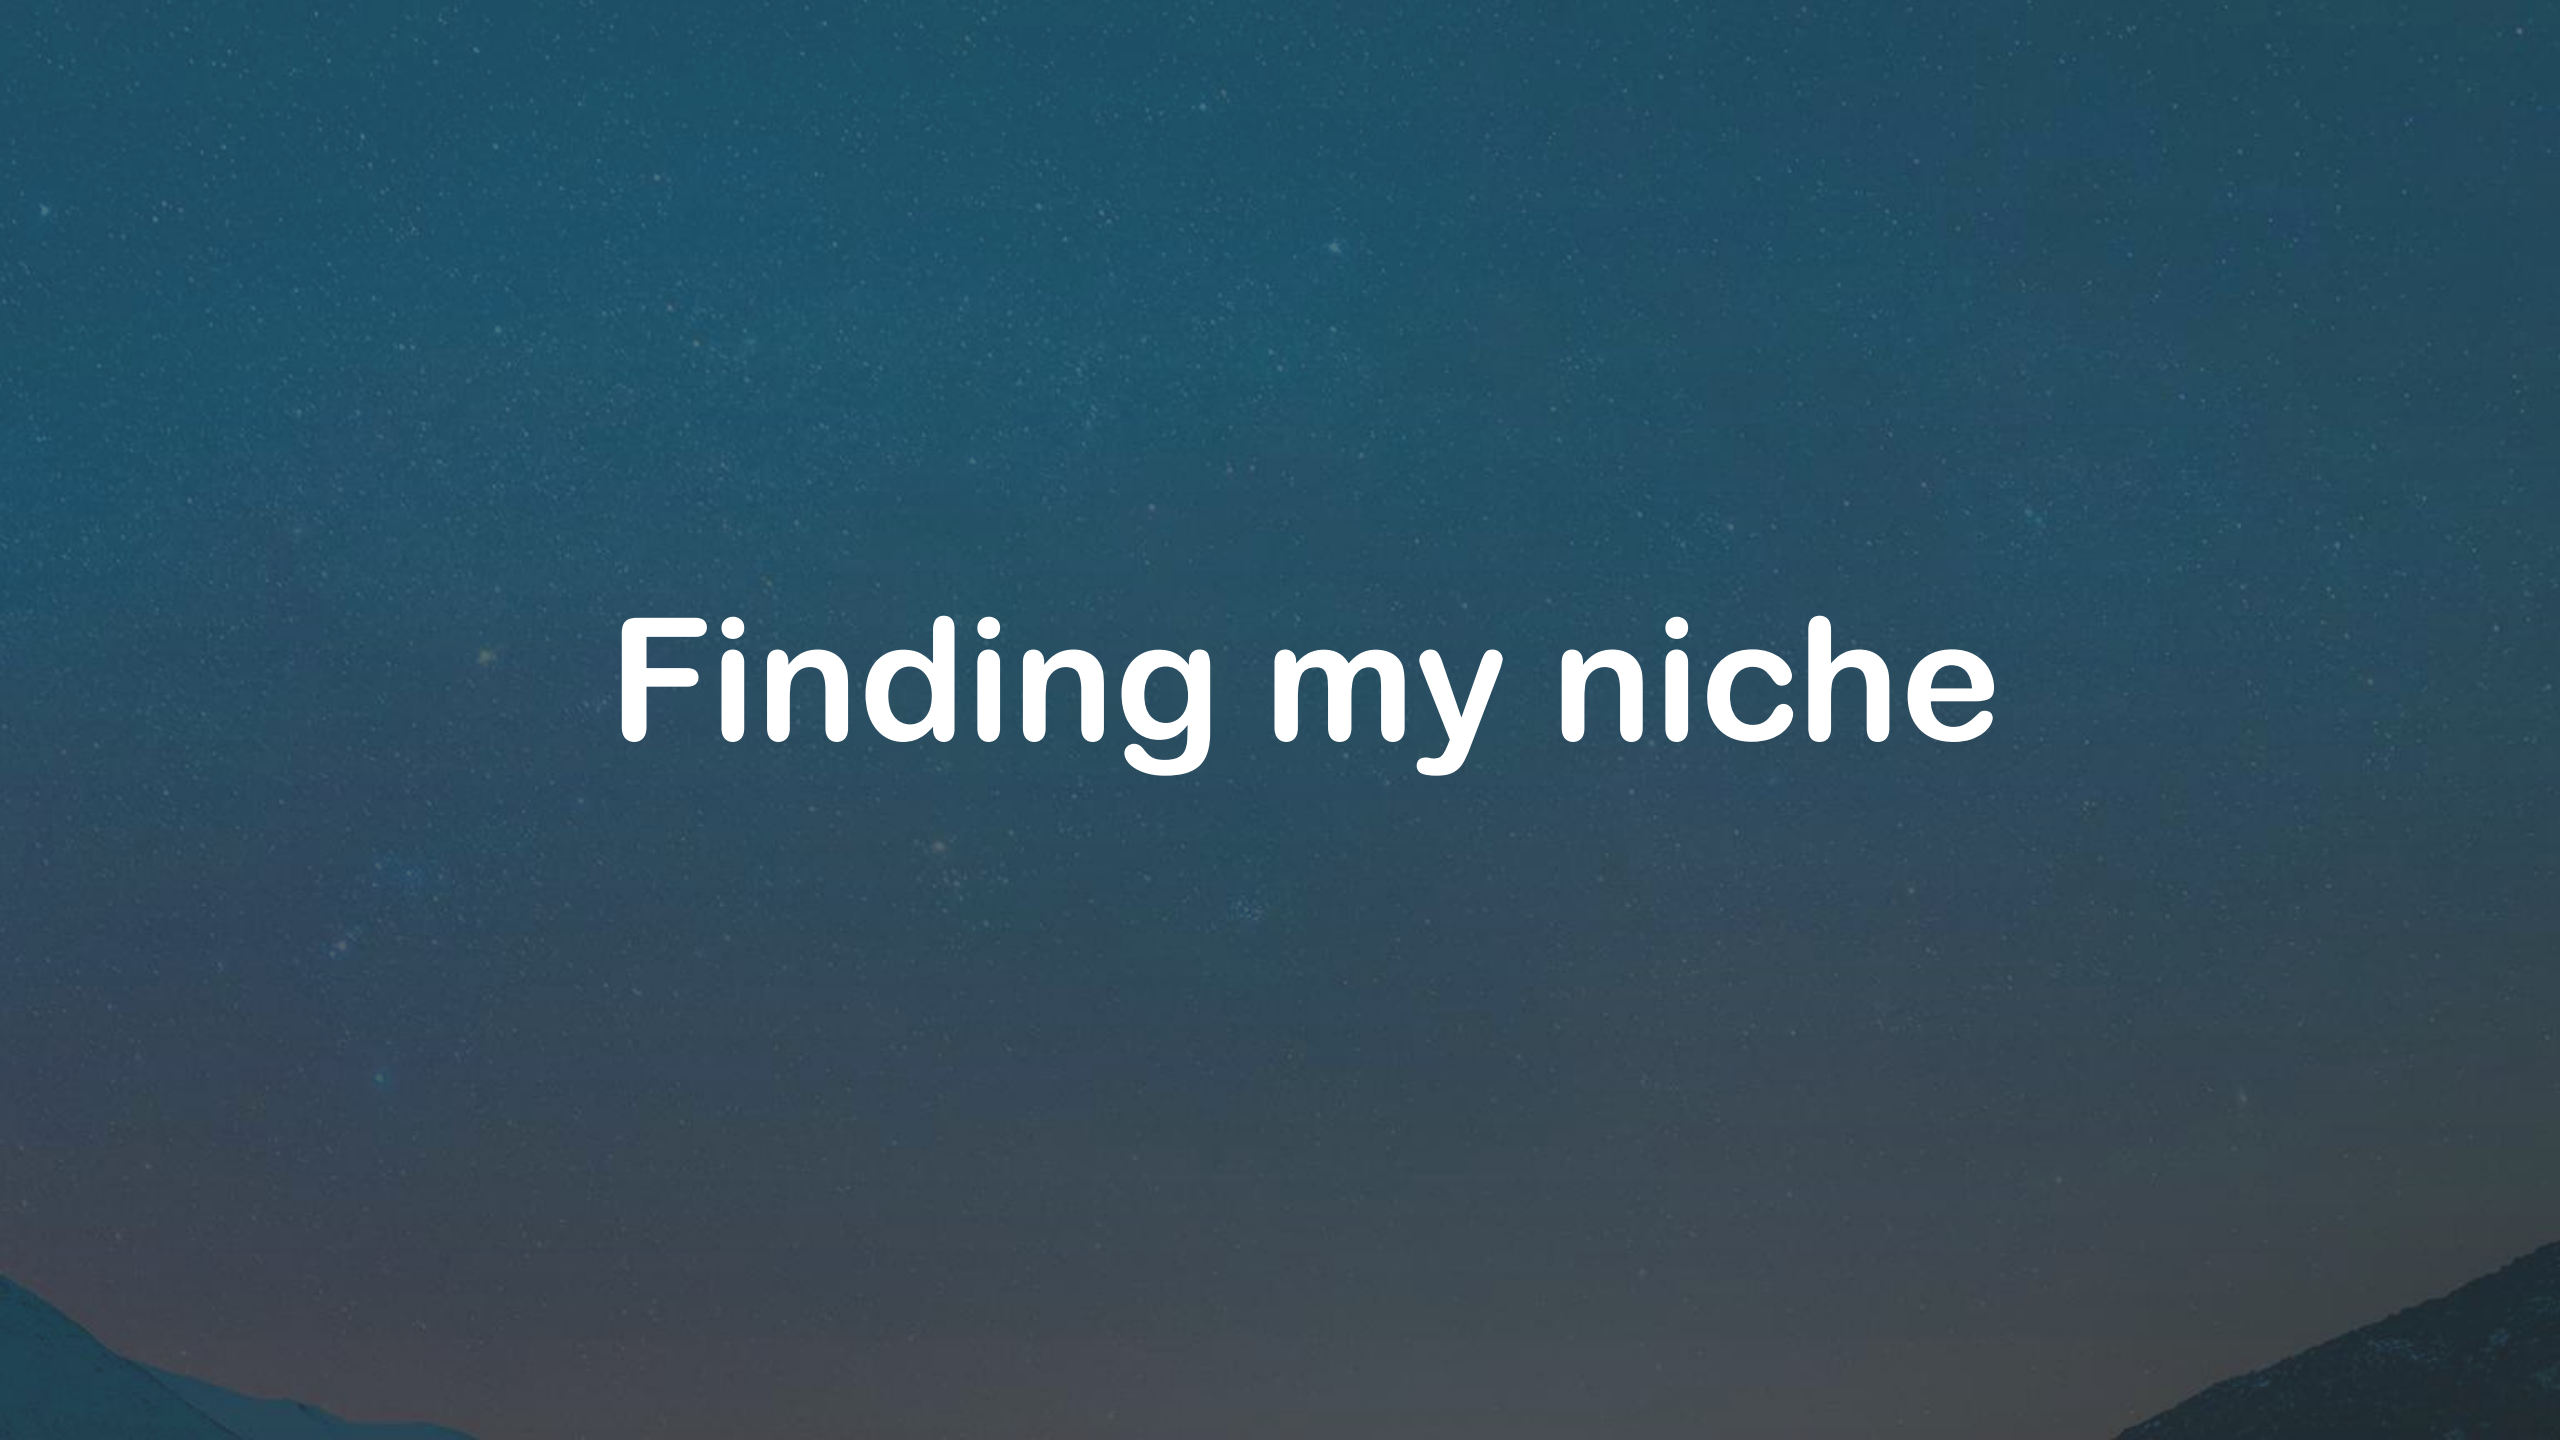

Time series vs totals

- Business users often ask: “What’s the current total?”
- In real-time, it’s more about “What just changed?”

Dashboards behave different

- It's alive...
- What is “good design”?
- What does THIS audience need?

Finding my niche

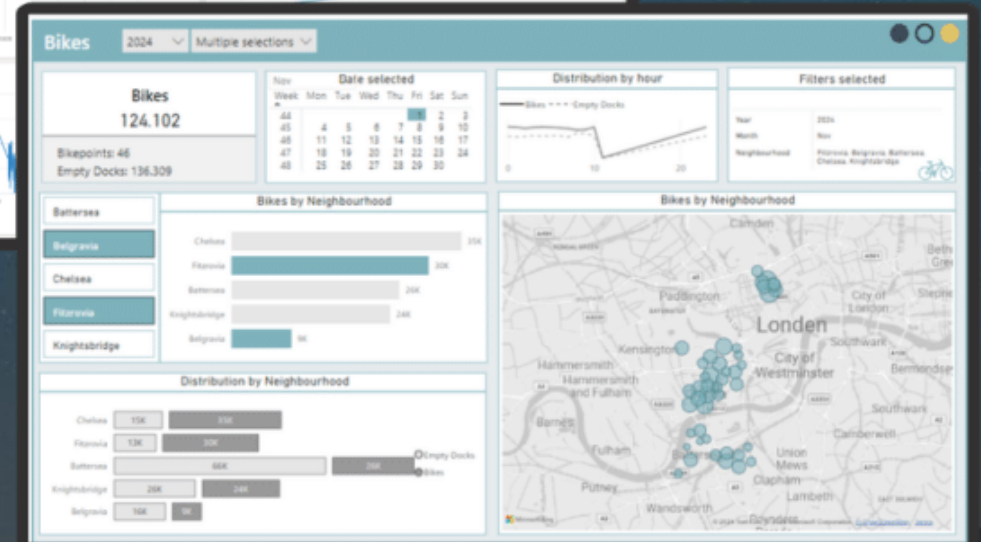

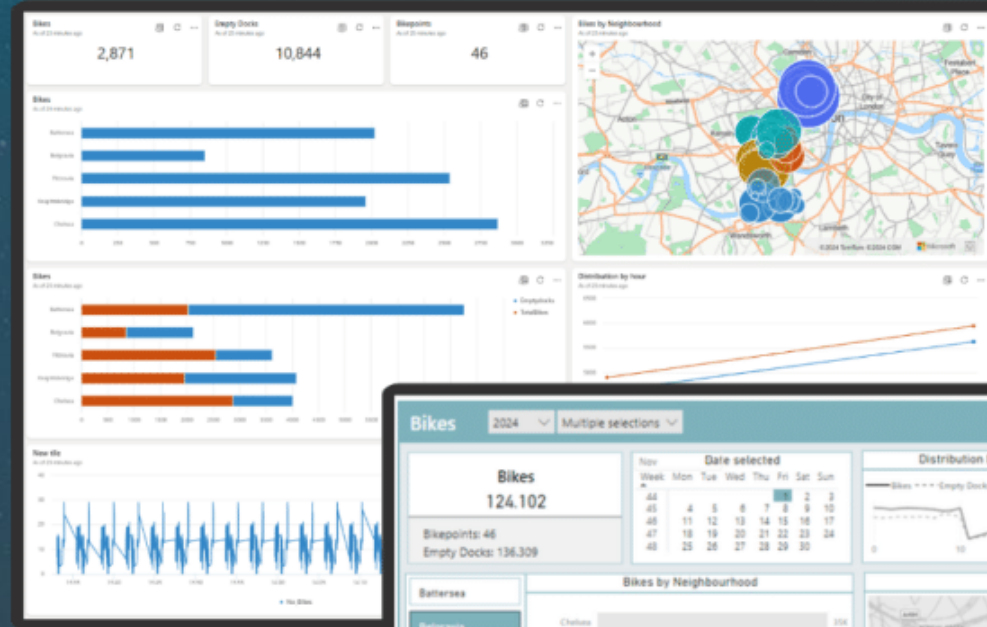

Finding MY niche

- What do I like?
- What “sparks” joy?
- I can't do stuff I am not interested in...

You don't have to do
everything!

Finding MY niche

- What do I like?
- What “sparks” joy?

Finding MY niche

User experience

User guidance

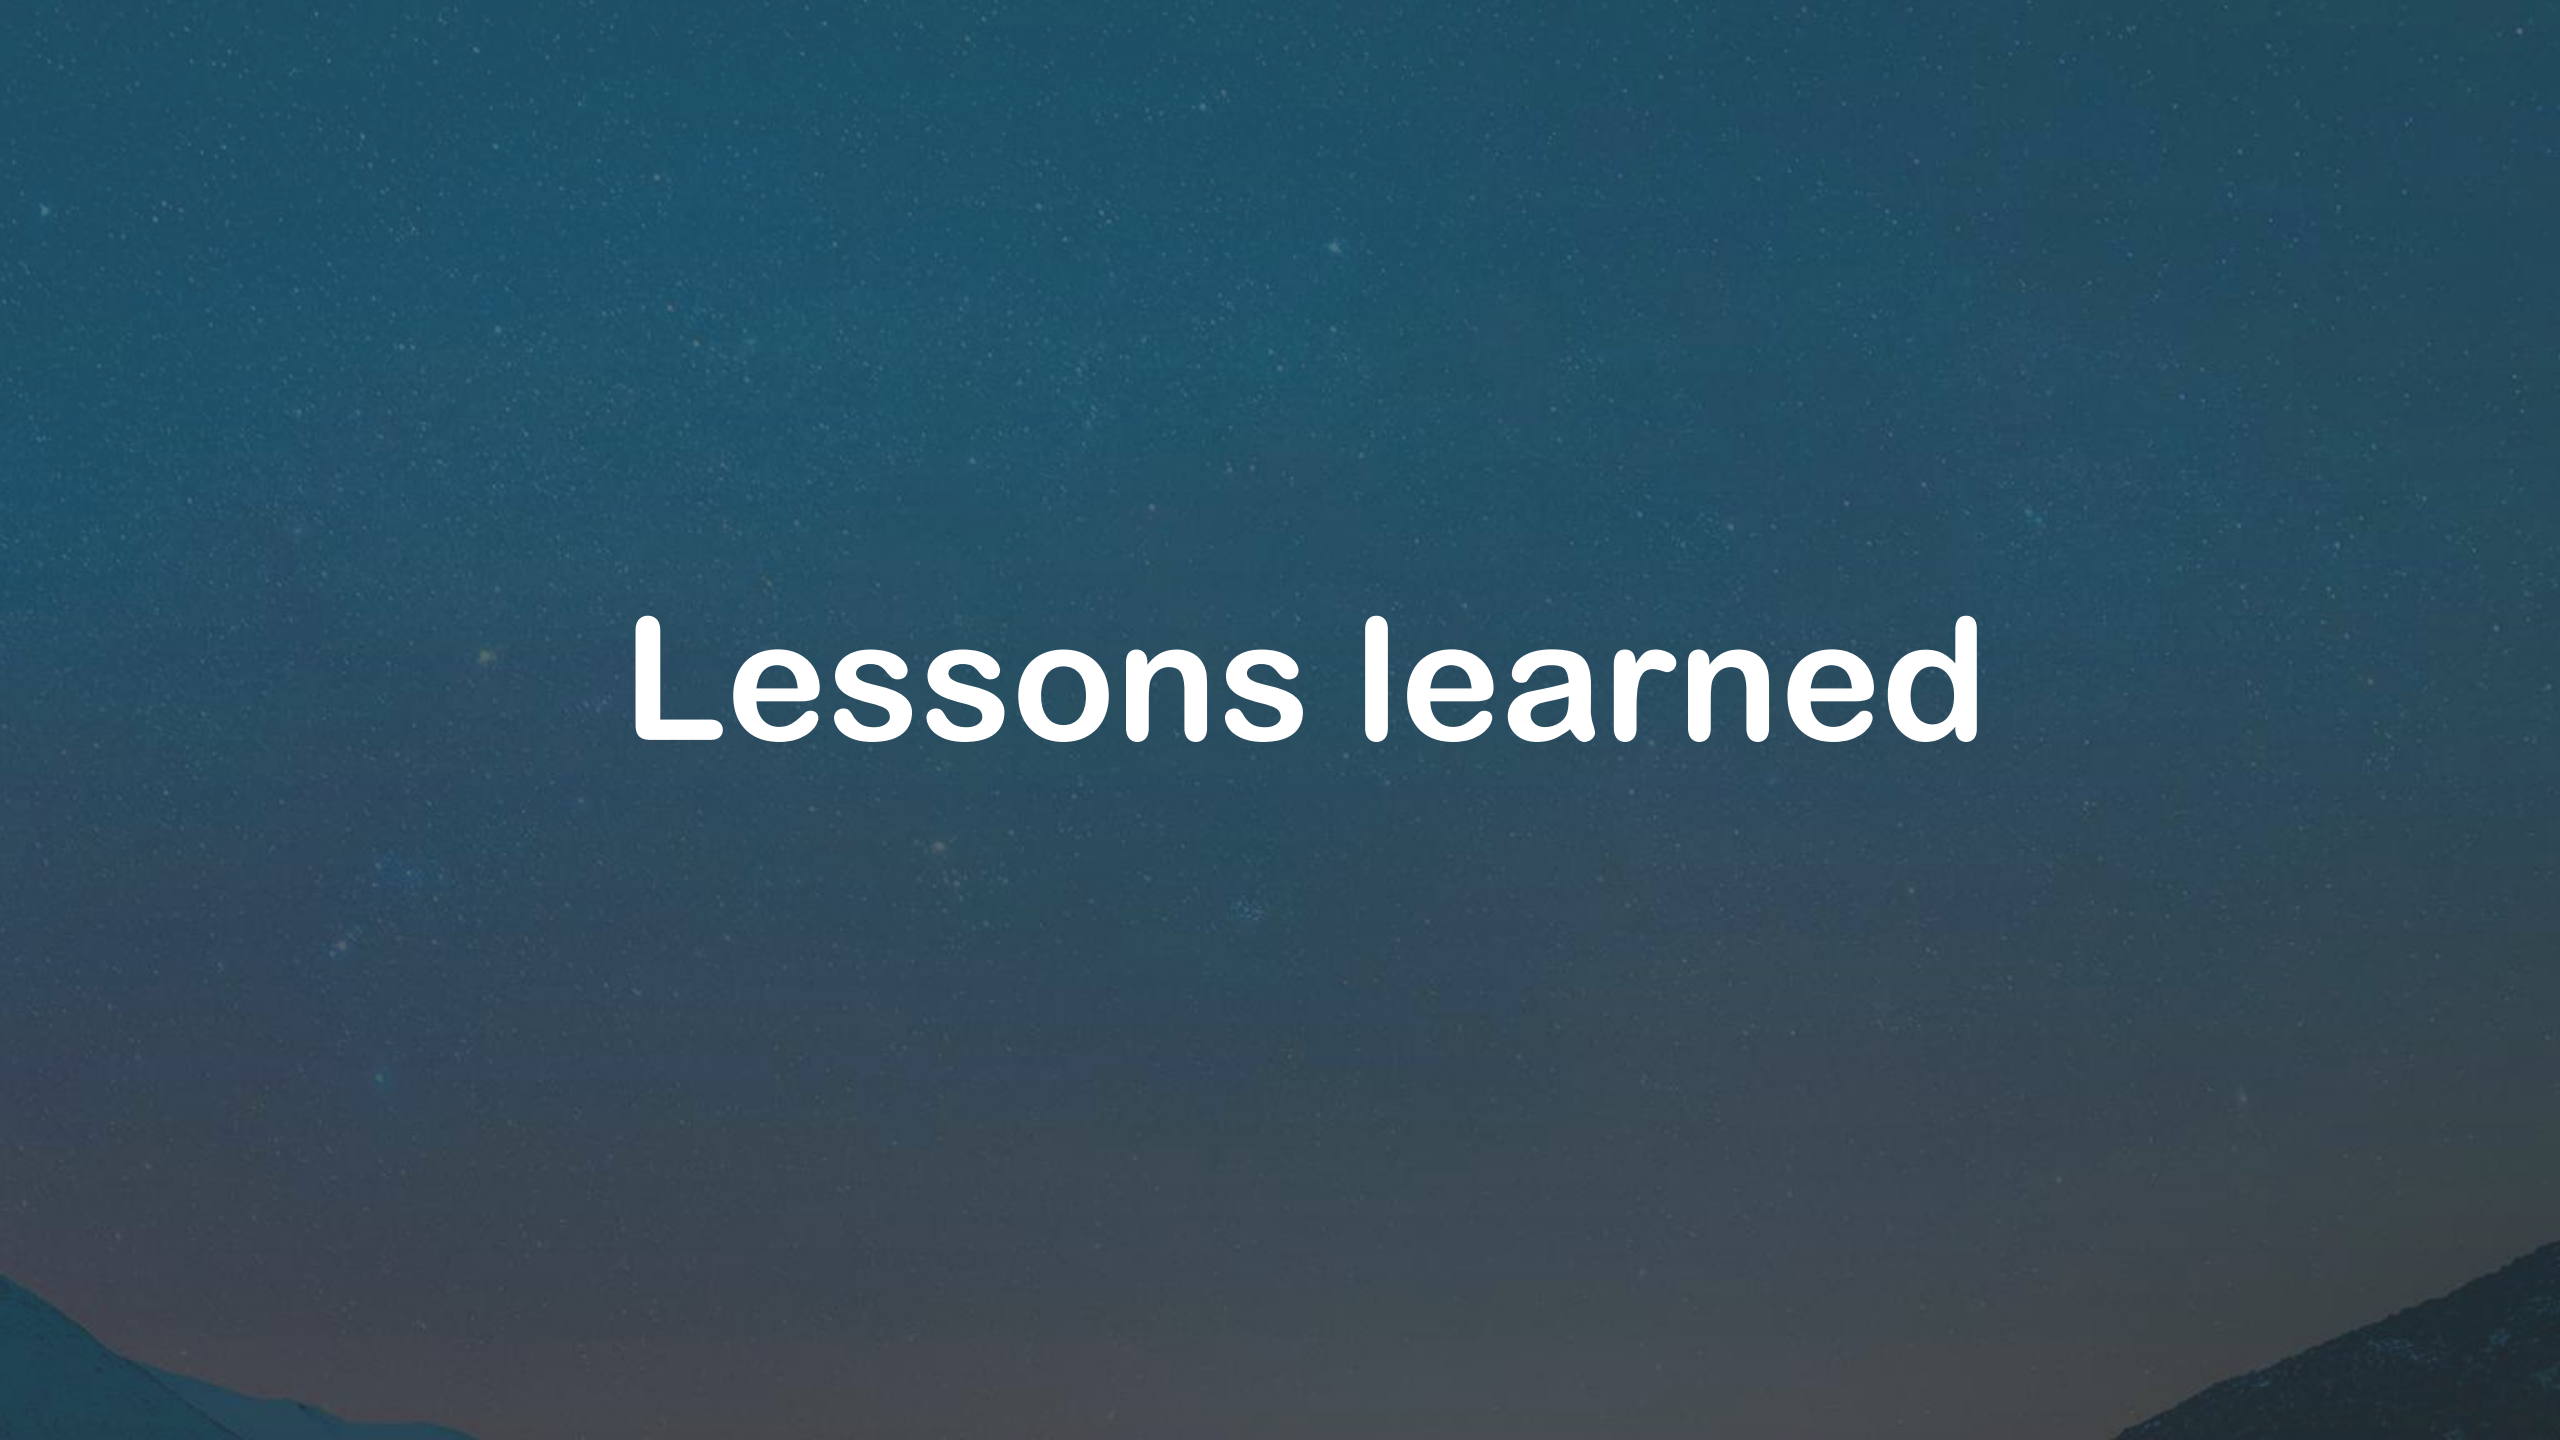

First steps

Finding the “Problem”

- What does RTI actually solve...
- ... for MY clients
- And how can I add value?

Lessons learned

Be curious

- Check what is available.
- Do the things that are interesting (for you).
- Look for guidance.

Be curious

- Check what is available.
- Do the things that are interesting (for you).
- Look for guidance.

▼ Tutorials

▼ End to end tutorial

End to end tutorial - Introduction

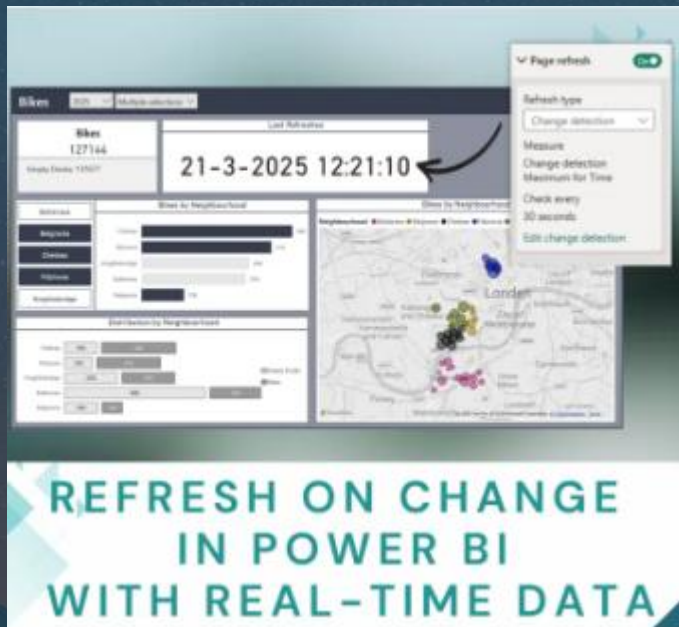

- 1- Set up Eventhouse
- 2- Get data in the Real-Time hub
- 3- Transform data in your KQL database
- 4- Query streaming data using KQL
- 5- Create a Real-Time dashboard
- 6- Create a Power BI report
- 7- Set an alert on your event stream
- 8- Clean up resources

Be creative

- Combine it with something you know
 - User experience
 - User guidance
 - Storytelling

Don't fear complexity

- You don't need to be THE expert!
- What matters to you?

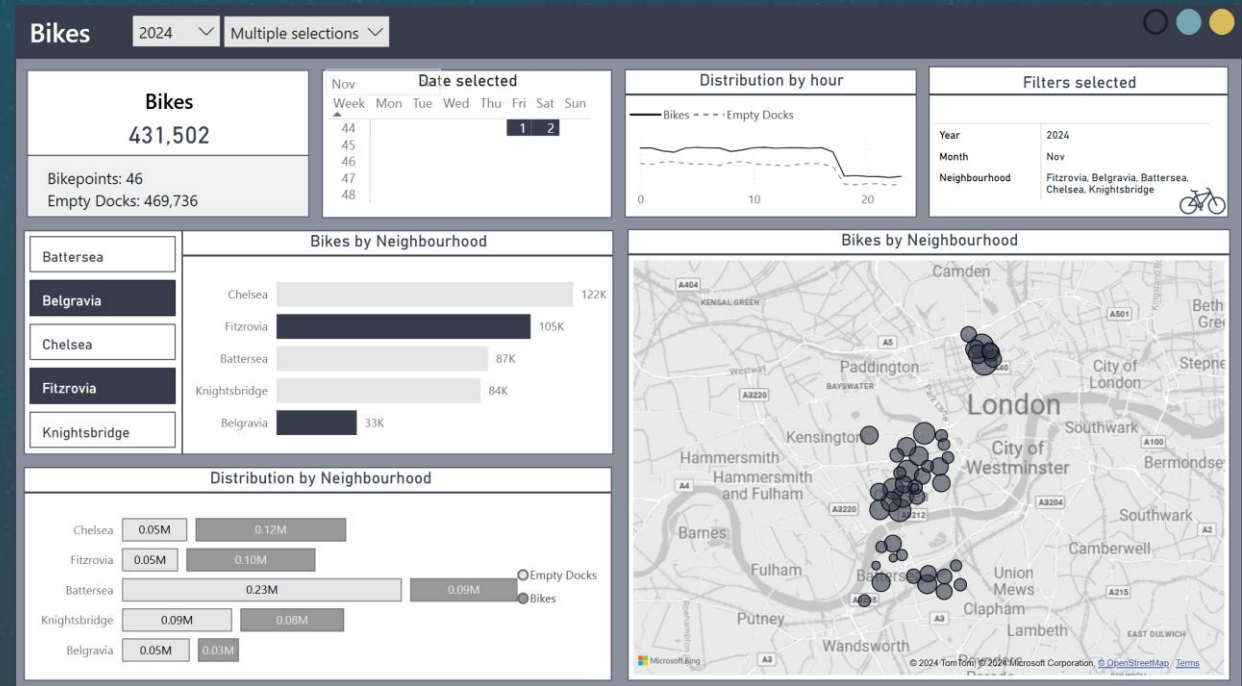

Choose your niche

- Don't do stuff just to “do it”.
- Find where you can (and want to) add value

What would I do different?

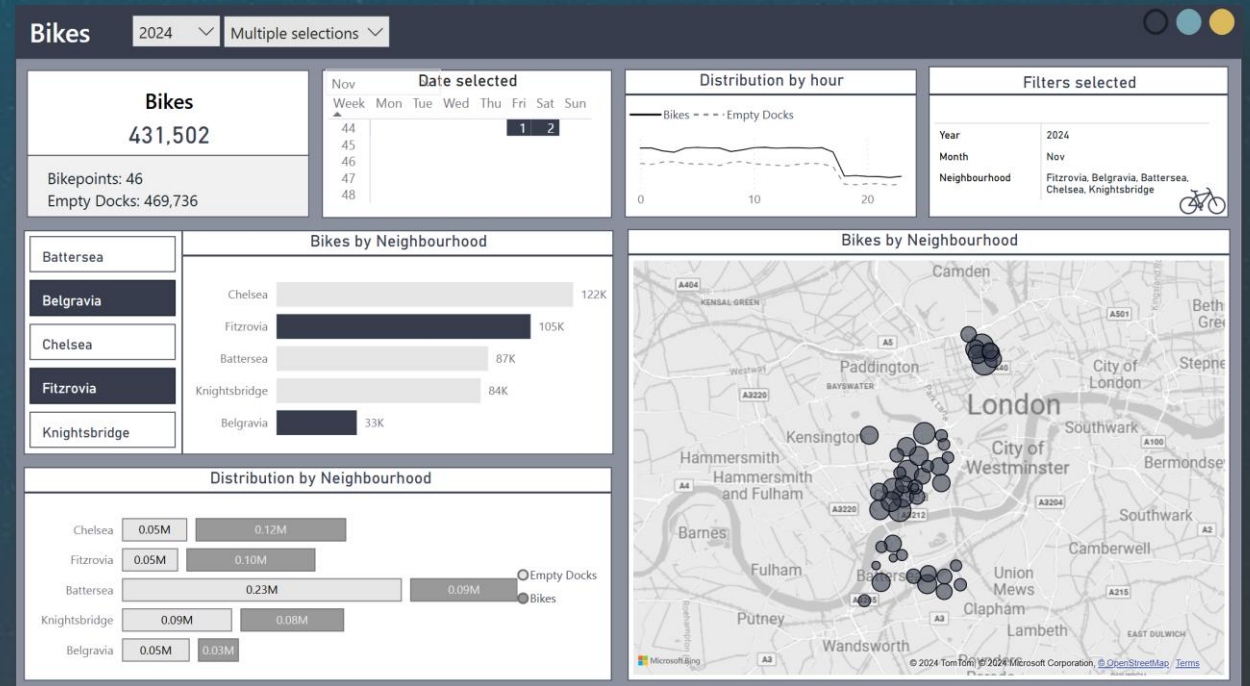

Start smaller

- The “perfect” dashboard
- Data Power BI
- Guiding the user
- Real time data
- Formatting
- Additional “DAX magic”

Why am I doing this?

- How does this add value?
- Does real-time really add value?

Takeaway

- Start small
- Ask **why** before how
- Build on what you know
- Find your niche
- Be **curious** and **creative**
